Vehicle Tracking from Communications Network Ltd

The Technology

A black box is fitted into the vehicle. This receives real time information such as location, direction and speed from satellites via the GPS network.

The Black Box then sends this information via GPRS to the Network Tracking center. You log into the system via a standard web browser.

Which allows you to connect and track your vehicle location and usage, all in real time via a standard web interface such as Internet Explorer or Firefox.

For more details of our tracking systems, please call us now on 07973 559 441

Vehicle Tracking from Communications Network Ltd

The Benefits

Monitor

- Vehicle Speed
- Mileage
- Time on job
- Driver downtime
- Start and End times
- Vehicle Location

Live Mapped displays allow you to track a vehicles location, speed, stoppage time and journey start and end time.

Reports can be generated to allow statistical analysis of vehicle and driver activity.

Improve

- Productivity
- Efficiency
- Customer Service
- Driver Safety
- Asset Security

Automatic usage reports, mileage reports, time sheets and location reports are just some of the features we can offer to help you improve the way in which your fleet is managed.

Tracking allows better security, better driver safety and can help you be more efficient and provide a better service.

Reduce

- Overtime costs
- Insurance Premiums
- Fuel bill
- Un-authorized vehicle use

Many major insurers now offer a discount for anyone who runs vehicles with trackers installed.

Overtime costs can be massively reduced due to the increased efficiency of the fleet.

Fuel bills and un-authorized vehicle use can be heavily reduced.

Optional Extras

In addition to the real time monitoring and report system we offer, there are a number of additional extras available, which can enable you to enhance your fleet.

*Some of these options may require the purchase and installation of additional hardware, so please call us for further details.

V.A.N.S (Vehicle Alert Notifications System).

This option emails your clients when your driver/engineer is in their area. They can then call you or the driver should they require your services so improving productivity and customer service.

Alerts

Units can be configured for panic buttons, vehicle status alerts ie; rear doors opened, PTO in operation ect, Navman display screens can be fitted for status messaging

CANBus*

This option allows the fleet manager to monitor the vehicles performance via the vehicles own diagnostic system, meaning minimum vehicle downtime as well as saving hundreds of pounds on garage fees for fault finding.

Given the low cost, the reduction in fuel bills, increased efficiency of business and improved security, can your fleet afford *not* to install a tracking system?
